

Canada's New Wheat Crop Report, Growing Quality

2023 Crop Summary

CWRS Canada Western Red Spring

The most widely grown wheat class in Western Canada, CWRS is regarded for its superior milling and baking quality. This hard wheat has high protein content and high protein quality which means it can improve the quality of a blend if milled with lower-quality wheat.

Top Five CWRS Varieties Grown in 2023

- 1 AAC Brandon
- 2 AAC Viewfield
- 3 AAC Wheatland
- 4 AAC Starbuck
- 5 CDC Landmark

2023 EXECUTIVE SUMMARY

PRODUCTION

(5-year average, 2018-2022)

19.9 million tonnes

TOTAL WHEAT GROWN IN CANADA

63%

Protein

13.8% protein content, which is similar to the 10-year average of 13.7%.

Advice from an Expert

Sound wheat with a balance of gluten strength and extensibility.

Grading Factors

97% of the 2023 CWRS crop has graded No. 1 and No. 2.

Milling Quality

Sound wheat with good test weight and low ash content.

Application Performance

Baking: Very good bread quality. Noodles: Good colour retention and texture.

2023

CWAD Canada Western Amber Durum

Canada is the world's leading exporter of durum wheat. CWAD is recognized for its high protein content and semolina yield. Development of new CWAD varieties has resulted in improvements in yellow colour and gluten strength.

Top Five CWAD Varieties Grown in 2023

- 1 Transcend
- 2 CDC Precision
- 3 AAC Stronghold
- 4 CDC Defy
- 5 CDC Alloy

2023 EXECUTIVE SUMMARY

PRODUCTION (5-year average, 2018-2022)

5.2 million tonnes

TOTAL WHEAT GROWN IN CANADA

17%

Protein

Protein content remains high at 14.9%, which is higher than the 10-year average of 14.1%.

Advice from an Expert

Semolina milled from the 2023 CWAD crop has high yellow pigment content, low ash content and good processing quality.

Grading Factors

83% of the 2023 CWAD crop has graded No. 1 and No. 2.

Milling Quality

Lower ash content for both No. 1 and No. 2 CWAD compared to 2022.

Application Performance

Spaghetti has bright, yellow colour with excellent texture and low cooking loss.

CPSR Canada Prairie Spring Red

With medium kernel hardness and protein content, CPSR has high milling yields with low flour ash resulting in flour with bright colour. Flour milled from CPSR can be used to produce high-quality baked goods and noodles.

Top Five CPSR Varieties Grown in 2023

- 1 AAC Penhold
- 2 Accelerate
- 3 AAC Goodwin
- 4 5700PR
- 5 AAC Foray

2023 EXECUTIVE SUMMARY

PRODUCTION

(5-year average, 2018-2022)

1.7 million tonnes

TOTAL WHEAT GROWN IN CANADA

5%

Protein

12.7% protein content which is similar to the 10-year average of 12.5%.

Advice from an Expert

CPSR offers a balance of strength and extensibility resulting in high quality end-products.

Milling Quality

CPSR from the 2023 crop year has milling performance typical of CPSR quality with good test weight.

Grading Factors

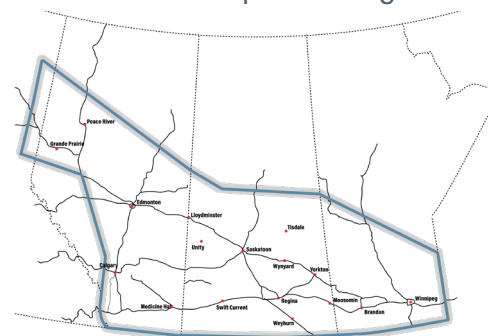

94% of the 2023 CPSR crop graded No. 1 and No. 2.

Application Performance

Flour milled from CPSR has good processing quality resulting in high-quality bread and noodles.

CESRW Canada Eastern Soft Red Winter

Grown largely in Ontario, with additional production in Quebec and the Atlantic provinces, CESRW is a soft, low protein wheat ideal for cakes, pastry, cereals, crackers, biscuits, and fillings. It is easy to mill and typically has a high flour yield resulting in flour that is bright and creamy in colour.

2023 EXECUTIVE SUMMARY

ONTARIO PRODUCTION

2.4 million tonnes

TOTAL WHEAT GROWN IN CANADA

8%

WINTER WHEAT GROWN IN CANADA

76%

Protein

9.5% protein content. Protein levels are ideal for this class and slightly higher than last year, exactly in line with the five-year protein average.

Advice from an Expert

Very strong, consistent quality this year with the vast majority of the crop in milling grades. Mildew was the primary downgrading factor between No. 1 and No. 2 and no presence of fusarium. Acceptable falling number across all grades with an average of 318 seconds.

Grading Factors

94% graded No. 2 or above.

Milling Quality

Milling yields, as well as those corrected to a 0.50% ash basis are slightly lower when compared to last year, but are still at acceptable levels and within the expected range. Starch damage is slightly lower from 2022.

Application Performance

Good protein content coupled with good amylograph peak viscosity led to acceptable cookie bake test results in terms of cookie width to thickness ratio, resulting in a good cookie spread factor. These values are slightly lower than last year but are still very acceptable.
